Development technology expert for advanced manufacturing innovations; concept, prototype, product, process improvements; coaching IPR and winning first orders for new sectors; promotion of technology opportunities. R&D Tax Credit funding specialist.

Making UK manufacturing prosper through the benefit of emerging technologies, identifies where new products and new processes are a key benefit to incoming business and margins. Often through commercialisation of research, it is possible to update product features and identify where new opportunities find interest. Hands-on consultancy has led to first orders and commercial agreements in various sectors. Concentrating upon receptive markets where customers are helped to optimise new technologies, transferred cleverly, and profitably.

**Specialties:** Leading the commercial success of manufacturing developments, including technical and commercial aspects of launching new products and services, such as for:-

- Engaging industry with emerging technologies for business development.
- Extensive network and understanding of industrial interests for the promotion of new technologies.
- Designs and proving test procedures of materials and components by simulation and non-destructive testing
- TRIZ, problem solving technique based upon successful product and process development.

**Patrick** is a Chartered Engineer through the Institute of Engineering Designers, with an MSc in Global Product Development Management.
